X-plore™
ReSound

Life without limits

Core technology

ReSound X-plore™ is built on a foundation of tested, reliable technology from past ReSound hearing instruments.

The technology is so reliable 9 out of 10 hearing instrument wearers would recommend a similar device to a friend.

Open (non-occluding) solutions were created by ReSound in 2003. Open hearing instruments provide both comfort and more natural sound to the wearer. This new innovation revolutionized the hearing industry, and now Open fit accounts for the majority of hearing instruments worn today.

Design

Beauty and function

ReSound X-plore is available in a cosmetically appealing design. The battery compartment enables simple insertion and changing of batteries. The volume control and push button are ergonomic and easy to manipulate.

Built to last

Internal design is just as important. Protective materials have been added to ReSound X-plore to minimize the effects of humidity, moisture and jarring. Anti-corrosion protective coating is applied to all internal components. The volume control and push button are rubber-sealed to protect against humidity and dirt. And, extended battery life is possible through power-saving chip technology: up to 330 hours from one size 13 battery.

ReSound X-plore is superbly designed inside and out. This attention to detail provides appealing cosmetics, additional and easy functionality, and outstanding durability.

Latest Advancements

Catch the conversation

ReSound X-plore improves your focus on voices in noisy situations with MultiScope™ Adaptive Directionality. Noise Tracker™ II further improves hearing in complicated situations by reducing background noise without diminishing voices.

ReSound's Dual Stabilizer™ II feedback suppression eliminates the annoying whistling that accompanies many other hearing instruments.

Take the action outside

ReSound X-plore also features Active Wind Stop™ to specifically suppress the sound of wind and ensure comfort when you are outdoors.

At your own pace

While all of these advancements work together to improve your hearing, a new hearing instrument can take a lot of getting used to. ReSound X-plore features Acceptance Manager™, which acts as a personal "sound coach" that gradually and comfortably increases sound levels over a period of time. ReSound X-plore keeps pace on the way to a successful, comfortable, fitting.

Value

"A lot of hearing aid for the cost."

- Current instrument wearer

ReSound X-plore is a hearing instrument that offers proven core technology, cutting-edge design and the latest in hearing advancements at a reasonable price. And, ReSound offers a strong warranty for loss, damage and repair.
